WORK EXPERIENCE

Trove Brands - Software Developer *March 2026 - Present*

- Primary engineer for the Oath Nutrition storefront, owning all major features end to end
- Built checkout discount and bundle logic as Shopify Functions using TDD
- Re-architected a per-store AWS Lambda service into a single multi-tenant, config-driven app
- Built an AWS Lambda that syncs production Shopify data into dev stores for realistic testing
- Built CI/CD pipelines and testing infrastructure to support the team's agentic development workflows

Signos - Software Engineer *July 2025 - March 2026*

- Led development of a Next.js/TypeScript e-commerce platform with Shopify Storefront API (GraphQL), delivering subscription flows, cart lifecycle management, discounts, and checkout
- Built Shopify webhooks, subscription billing integrations, and async pipelines processing ~250 glucose readings per user daily in a large-scale Python/FastAPI backend
- Cut admin API response times 2-3x for customer service by resolving an AWS routing misconfiguration, and drove conversion with server-side feature flags and A/B testing in PostHog

Sorenson Communications - Software Engineer *December 2022 - July 2025*

- Architected and built a real-time ASL interpretation platform from the ground up using React, Node.js, and AWS (Lambda, DynamoDB), from planning through production deployment
- Delivered QR-based interpreter access for in-store accessibility and improved the mobile authentication flow
- Implemented geofencing, automated billing, and SSO-based enterprise access controls

Kantata (Formerly Mavenlink) – Software Engineer Intern *May 2022 – August 2022*

- Built admin panel features in Ruby on Rails and React, including a secure user impersonation tool to enhance QA
- Integrated Salesforce and Slack into the product ecosystem, simplifying customer workflows

Zions Bank – Software Engineer Intern *October 2021 – May 2022*

- Modernized UI components using Salesforce, JavaScript, and CSS, improving design consistency and usability
- Automated redaction of PII from financial documents, saving manual processing time and increasing compliance

PERSONAL PROJECTS

Balancely – Personal Project *January 2026 – Present*

- Built a full-stack personal finance platform using Next.js, TypeScript, PostgreSQL, and Prisma ORM with token-based authentication and a comprehensive REST API
- Integrated AI/ML features including OCR receipt scanning, voice-to-transaction processing, and auto-categorization
- Dockerized and self-hosted PostgreSQL, Garage (S3), OpenWebUI, Sentry, and the app

Tyler-Grant.com – Portfolio Website *June 2025 – Present*

- Built a full-stack web application with an admin CMS for managing projects, hobbies, contacts, and chat sessions
- Integrated AWS S3 for image storage, NextAuth for authentication, and Nodemailer for contact form delivery
- Built an AI chat assistant and interactive visualizations; automated deployment with GitHub Actions and PM2

Self Hosted Media & Automation Platform - Full-Stack Infrastructure Development *September 2022 – Present*

- Built a Docker-based, self-hosted ecosystem (Plex, Sonarr, Radarr, Home Assistant) with secure reverse proxy access
- Automated home and media workflows via REST APIs, webhooks, and OAuth2 authentication
- Deployed GitHub Actions runners for CI/CD and added logging, backups, and monitoring to maintain uptime

TECHNICAL SKILLS

Languages/Frameworks: TypeScript/JavaScript, Python, C#, Java, C++, Ruby**,** React, Next.js**,** Node.js, FastAPI, Rails
Cloud/Infra: AWS, Docker, Kubernetes, CI/CD
E-commerce: Shopify (Storefront & Admin APIs), Hydrogen, Shopify Functions, Liquid, Builder.io
Tools: Git, PostgreSQL, MySQL, GraphQL, Salesforce, Postman, NewRelic, Honeycomb, Sentry

EDUCATION

University of Utah *August 2019 – December 2022*

Bachelor's of Science in Computer Science (GPA: 3.8)

- Teaching Assistant for Data Structures and Algorithms, Object Oriented Programming, and Software Engineering I
